SYRACUSE. 111. The open bloom, which is borne singly or a -trong stem, is full double, bright crimson in color. The petals are wavy, with outer petals found.

## ROSEMONT'S HYBRID TEA ROSES

So much has been written recently about Texas Roses that we rise to defend the growers of the Lone Star State. Texas can produce as good Roses as any state in the Union, and with due modesty we say that Texas can produce better Roses than some more famous sections. For many years Rosemont Nurseries have grown and sold only first-grade plants. So have some other Texas growers If a purchaser chooses to buy cheap plants because they can be bought for a few cents, he should not assume that all Texas plants are cheap. A quality article, whether it be shoes or hats, radios or

ranges, cannot be had at cut prices.

The available supply of good Roses is much lower than for several years. Weather conditions in 1937 were little, if any, better than in 1936; budding could not go on as usual. Because of these con-litions we carried our budding operations over a longer season, and therefore, have a reasonable supply of best-grade plants. Please remember that Rosemont Roses are best-grade, 2-year-old, low-budded, field-grown plants. We suggest that you read the Guarantee.

All Roses here listed are 30c each, \$3 per doz., ppd. except where noted

AMI QUINARD. III. The soft old-ruse fragrance makes this Rose doubly delightful. The buds open
